Diego Ruiz Gil

Software Engineer

Seville, Spain +34 681 24 02 11

diegoruiz037@gmail.com • LinkedIn • Portfolio • GitHub

Profile

Software Engineer specialized in **Clean Architecture, DDD and TDD**, with a solid foundation in **C#/.NET**. Trained in **Software Engineering** and **Video Game Development**, with professional experience in **Unity** and personal projects focused on **robust backend systems**.

Skills

Languages: C# · Java · Python

Backend: ASP.NET Core · Entity Framework Core · REST APIs · Minimal APIs

Asynchronous messaging: RabbitMQ · MassTransit · Quartz.NET

Databases: PostgreSQL · MariaDB · MySQL · MongoDB

Architecture: Clean Architecture · DDD · MVC · SOLID · design patterns

Testing: TDD · xUnit · Testcontainers · WebApplicationFactory · Moq

DevOps: Docker · Docker Compose · Git · Railway

Game engines: Unity (primary) · Unreal Engine and Godot (familiar)

Other: JWT · FluentValidation · CsvHelper · Agile/Scrum

Profesional experience

Junior Unity Programmer, Viva Games Studios — Sep. 2024 - Feb. 2025

*Maintenance and updates of Merge Robots, a **mobile game built in Unity**.*

- Developed a playable ad (**playable ad**) to promote the game.
- Builds for **iOS** and **Android**.
- Integrated **AppLovin** monetization.
- Worked directly with the **marketing** and **QA** teams.

Junior Software Engineer, Ghenova Digital — Jan. 2023 - Jun. 2023

Development of a prototype radar system for ships in Unity.

- Prototyped **real-time** radar **data visualization**.
- Definition of a **coordinate system** and visual representation on a map using **cartographic projections**.

Education

Master's degree in Video Game Development, University of Málaga — 2023 - 2025

Bachelor's degree in Software Engineering, University of Seville — 2019 - 2023

Languages

Spanish: Native · **English:** Advanced (B2)

Personal projects

Async Csv Processor | GitHub

Bulk import system for products via CSV with **asynchronous processing**: the API responds instantly and an independent worker processes the file in the background, with automatic recovery of stuck jobs. **Clean Architecture**, **Docker**, priority-based **RabbitMQ** queue.

GameLoggr | GitHub

Letterboxd-style **REST API** for managing a video game library. **Clean Architecture**, **JWT** authentication, **FluentValidation** validation, containerized and deployed on Railway. Integration **tests** with **WebApplicationFactory** and **Moq**.

Pokemon Battle Clone | GitHub

Pokémon-style **turn-based combat system** in Unity with **online multiplayer for two players** using **Photon Fusion 2** (Shared Mode, lobby via session code). **Domain decoupled** from the engine and the network, Clean Architecture, MVC, and TDD with full coverage. Turn-based flow using **async/await** and deterministic battles via injected RNG. Playable in a browser (**WebGL**).
